

Esmertec signs reseller agreement with Logic Technology for OSVM Product Line

Duebendorf-Zurich, Switzerland, and AB Panningen, Netherlands, August 16, 2005 – Esmertec™, a leading global, independent developer of software solutions for mobile handsets and embedded devices, and Logic Technology (Logic), a reseller of software and hardware solutions for embedded design providing pre- and post-sales support, have signed a reseller agreement that leverages Logic's extensive network in Europe to offer OSVM™, Esmertec's real-time object-oriented software platform.

OSVM is designed and developed for connected embedded devices with exceedingly small memory such as alarm systems, telemedicine and telematic devices, RFID readers, billboards, point-of-sales and vending machines.

This platform dramatically reduces software development and integration effort through high-level object-oriented programming. Additionally, OSVM delivers cost savings in maintenance and servicing through remote diagnosis, monitoring and bug fixing features; all of which can be performed without any disruption to the running system.

Logic and Esmertec will jointly organize customer road shows, technical seminars, training and other marketing activities to present OSVM's benefits and applications. The first road show is planned from 22 to 29 September, covering The Netherlands, Switzerland, Germany, France, Denmark and the UK.

"Esmertec's OSVM product is an excellent software platform that will resolve issues such as serviceability and software updates," said Leon Houwen, Managing Director, Logic Technology. "Reduction in hours spent on software customization for different platforms and minimal operation downtimes are some of the key advantages that our customers can profit from."

"Our partnership with Logic will enable us to shorten the time-to-market of OSVM by leveraging their broad European network," said Bernard Tracol, Vice President of New Technologies, Esmertec. "We look forward to delivering OSVM and its benefits to embedded device, chipset and machine manufacturers."

About Esmertec

Esmertec is a leading provider of software solutions for mobile phones and embedded devices. Our high-performance solutions are delivered to chipset and embedded devices manufacturers in mobile and landline telecommunication, home-multimedia, machine-to-machine and consumer electronics markets. Engineered for smallness, Esmertec's wireless Java™ (Java ME) solutions, mobile applications and components, and object-oriented software platform (OSVM™) are designed to extract maximum performance from hardware environments. Founded in 1999, Esmertec is a global company headquartered in Zurich, with engineering, sales and customer support operations in Switzerland, China, Denmark, France, Japan, Korea, Singapore, Taiwan, the UK and the USA.

About Logic Technology

Our mission is to provide complete development suites, as well as the best possible pre- and post-sales support. We offer a complete range of high-performance development tools as well as embedded software products: from Code Generation to Simulation, real-time In-Circuit-Emulation, Device Programming and real-time operating systems for most popular processors, using powerful SourceLevel debuggers.

Logic Technology's Embedded Software group offers complete Embedded TCP/IP internet solutions, RTOS, processor and peripheral IP, Main Memory Databases, BIOS-, ROM-DOS, FlashFX (FlashDisk), FP Libraries, File Systems, as well as Compiler/Assembler/Linker & IDE toolchains.

Our Interconnect Solutions specialists provide assistance with any debug accessories, bug catchers, programming/emulator adaptors and package converters.

Our specialists in Device Programming offer state of the art programming systems (in-line, engineering, as well as JTAG) and JTAG boundary scan test systems, whereas our analyzer specialists offer fast, reliable and full featured analyzers for Bluetooth, USB, (c)PCI, PCI-X, PMC and Firewire.
